Dear Hiring Manager,

I am excited to apply for this position, bringing a strong blend of technical, analytical, and solution-driven capabilities, supported by over two years and half of hands-on experience. I am currently completing a Diploma in Computer Science (NQF 6), with one module remaining to be completed, which has further strengthened my practical and theoretical foundation in information systems and security.

My current role is focused on Database Security Monitoring (DSM) and data security, where I am responsible for monitoring database access, analyzing audit logs, identifying anomalous or unauthorized activity, and supporting investigations and audits. I work closely with security, compliance, and technical teams to ensure sensitive data access is properly governed, monitored, and reported in alignment with organizational and regulatory requirements. This experience has given me a strong understanding of data security controls, audit readiness, and risk-based monitoring.

In addition to my DSM responsibilities, I have a solid background in identity governance and access management, including authentication, authorization, access reviews, and auditing. I have hands-on experience with identity lifecycle management, role-based access control, and access certification, as well as designing and automating workflows to ensure timely, accurate, and secure provisioning and de-provisioning of access across enterprise systems.

I also bring strong reporting, analytics, and dashboard development skills. I am experienced in using SSMS, SSIS, Microsoft Power BI, and Excel to design KPIs, build dashboards, and deliver meaningful insights to both technical and business stakeholders. My technical skill set includes SQL, DAX, ETL development, Java, and MVC design patterns, enabling me to automate data processes and support effective, data-driven decision-making.

Additionally, I have worked with various identity and enterprise platforms, including Active Directory, LDAP, Azure, REST APIs, Postman, and SoapUI, and have supported integrations across multiple applications through workflow automation and custom connectors.

I am a strong communicator and collaborative team player who works effectively with cross-functional teams to deliver secure, scalable, and business-aligned solutions. My adaptability, analytical thinking, and problem-solving skills allow me to navigate complex technical challenges and consistently deliver high-quality results.

Thank you for considering my application. I look forward to the opportunity to contribute my database activity monitoring, identity governance, and reporting expertise to your organization.

Kind regards,
Tivani Mathebula

TIVANI NICK MTHEBULA

DAM SECURITY ENGINEER

EDUCATION

2012 – 2016

NYUMBANI HIGH SCHOOL

- NSC Admission to Bachelor's degree

2017 – 2018

DYNAMIC DNA

- NQF 5 Software Development

in progress(1 module left)

TSHWANE UNIVERSITY OF TECHNOLOGY

- Diploma Computer science

TECHNICAL SKILLS

- PowerShell
- TSQL and PLSQL
- JAVA
- PowerBI
- AD and Azure AD
- SSO, MFA and RBAC
- AVEKSA(RSA IGL)
- ETL
- Java
- Web API
- Data Pipeline

PROFILE

As a Database Security Monitoring (DSM) specialist with a strong foundation in Identity and Access Management (IAM), I focus on monitoring, auditing, and securing access to sensitive data while supporting compliance and risk management objectives. I bring proven experience in identity governance, access controls, and audit support, complemented by strong reporting and analytics skills. Through tools such as Microsoft Power BI, SQL, and enterprise reporting platforms, I translate complex security and access data into actionable insights, enabling informed decision-making across security, compliance, and business teams.

WORK EXPERIENCE

Hosi Technologies

2023 AUG – PRESENT

MTN

2023 AUG – 2025 NOV

IAM Engineer (Third Party)

As an Identity & Access Management (IAM) Specialist I am responsible in ensuring that access to enterprise systems and data is secure, compliant, auditable, and aligned with business needs. The IAM engineer is responsible for automating identity lifecycle workflows, governing access, and delivering reporting, KPIs, and audit evidence that provide clear visibility into identity risk, compliance posture, and operational effectiveness.

ESKOM HOLDINGS SOC

2026 FEB- PRESENT

DSM Engineer (Third Party)

As a Database Security Monitoring Engineer I am responsible for designing, operating, and continuously improving Imperva's Database Security Fabric (DSF) to provide centralized visibility, risk detection, and compliance reporting across enterprise data assets. This role focuses on DSF Hub, SecureSphere MX (DAM), and Data Risk Analytics (DRA) to monitor data access, detect anomalous behavior, and support regulatory and security objectives across on-premises and cloud environments.

CERTIFICATES

- Microsoft Power BI
- Cisco – Data analytics essential
- Cisco – Intro to Cyber security
- CompTIA Security +
- RSA – ID plus technical
- RSA – Governance & Lifecycle Technical
- RSA – SecurID Plus Technical
- Microsoft : Security, Compliance, and Identity Fundamentals
- Thales Data Security Fabric (DSF) Hub Core Engineer

- Data modelling
- Agent/agentless gateway installation
- Audit/Security Policies configurations on DSF/MX

OTHER SKILLS

- Time Management
- Teamwork
- Effective Communication
- Critical Thinking

TOOLS

- Visual studio
- Java IDE (NetBeans)
- Postman
- SoapUI
- LDAP – Apache Directory Studio
- SQL Server Integration Services
- SQL Server Reporting Services
- DBeaver CE
- SSMS
- Aveksa
- CyberArk
- DAM MX
- Imperva DSF hub
- Imperva DRA
- mobaXterm

LANGUAGES

- English (Fluent)

PROJECTS

Project Name: Access Reviews Power BI Dashboard

Company: MTN

Department: Information Security

Programming languages: TSQL, DAX, Python, PowerShell, Dax

Technologies used: DBeaver, Microsoft Power BI, Visual studio code, windows PowerShell

Project description: Build a comprehensive dashboard provides a centralized overview of access reviews across various campaigns, including the main campaign and Mover access reviews campaign.

Durations: 4 Months

Project Name: Collector Monitor Power BI Dashboard

Company: MTN

Department: Information Security

Programming languages: TSQL, PLSQL, Dax

Technologies used: SSMS, DBeaver, Microsoft Power BI

Project description: Build a dashboard that delivers actionable insights into the behavior and performance of collectors deployed on the Aveksa platform and provides a centralized view of collector status, covering Identity Collectors, Account Collectors, and other collector types campaign.

Durations: 2 Months

Project Name: Tender Tracking Power BI Dashboard

Company: Hosi Technologies

Department: Bid Office

Programming languages: TSQL, Dax

Technologies used: SSMS, Microsoft Power BI

Project description: Build a Tender Tracking Dashboard that provides a complete view of the tender lifecycle, helping bid office teams monitor activity, track performance, and manage deadlines efficiently.

Durations: 3 months

Project Name: Imperva DSM appliances implementation and configuration for QA and PROD

Company: Eskom Holdings SOC

Department: Information Security

Programming languages: Linux

Technologies used: CyberArk, Servers, Database agents, MobaXterm, SQL

Project description: Install all the Imperva appliances (MX server, DSF hub, DRA admin and Analytics, agent gateway and agentless gateway) then install database agents and agentless and integrate with systems like Splunk and Cortex for soc.

Durations: In progress
